

Hitads.ca - Checklist

HitAds.ca — SEO & Technical Development Fix List

Website: [HitAds.ca](https://hitads.ca)

Audit Sources Reviewed: Lighthouse Audit + Full SEO Audit Report

The website has a strong visual foundation and modern UI design; however, several critical SEO, crawlability, performance, and indexing improvements are required before scaling marketing campaigns and long-term organic growth initiatives.

The following fixes are recommended for implementation.

Critical SEO & Crawlability Fixes

Meta Description

The homepage is currently missing a meta description. This impacts search engine understanding and click-through rates in Google search results.

Implement an optimized meta description for the homepage and all major landing pages.

Recommended homepage meta description:

```
<meta name="description" content="HitAds.ca is Canada's modern classified ads platform connecting local communities, businesses, services, jobs, real estate, and marketplace listings across Toronto and beyond.">
```

robots.txt Validation

Previous Lighthouse audits identified significant robots.txt validation issues affecting crawlability.

Rebuild and validate the robots.txt configuration to ensure search engines can properly crawl and index the website.

Recommended configuration:

User-agent: *

Allow: /

Sitemap: <https://hitads.ca/sitemap.xml>

XML Sitemap Implementation

No XML sitemap was detected.

Generate and submit:

- Main sitemap
- Page sitemap
- Category sitemap
- Listing sitemap

The sitemap should then be submitted to:

- Google Search Console
- Bing Webmaster Tools

Canonical Tags

Canonical tags are currently missing.

Canonical URLs must be implemented across all pages to avoid duplicate content issues and improve indexing consistency.

Example:

```
<link rel="canonical" href="https://hitads.ca/" />
```

Schema Markup

No structured data or Schema.org implementation was detected.

The following schemas should be implemented:

- Organization Schema
- Website Schema
- SearchAction Schema
- LocalBusiness Schema
- Breadcrumb Schema
- Dynamic Listing Schema for classifieds pages

Minimum homepage schema example:

```
{  
  "@context": "https://schema.org",  
  "@type": "Organization",  
  "name": "HitAds.ca",  
  "url": "https://hitads.ca",  
  "logo": "https://hitads.ca/logo.png"  
}
```

Rendering & Indexing Issues

Excessive Client-Side Rendering

The audit identified an extremely high rendering percentage of 2205%, indicating heavy client-side rendering.

This is currently one of the most critical SEO issues on the platform because:

- Search engines may not fully read dynamically loaded content
- AI search engines and LLMs may miss content
- Crawlability and indexing efficiency are negatively affected

The website should implement:

- Server-Side Rendering (SSR)
or
- Pre-rendering/static rendering

Recommended approaches:

- Next.js SSR
- Nuxt SSR
- prerender.io
- Static rendering for category and listing pages

Homepage SEO Improvements

Title Tag Optimization

Current title tag:

HitAds.ca - Canada's Free Business Classifieds

Current length is only 46 characters.

Recommended replacement:

HitAds.ca – Toronto Classified Ads & Local Marketplace Canada

Content Expansion

The homepage currently contains only 284 words of crawlable content.

The homepage should be expanded to approximately 800–1200 words of optimized content including:

- About the platform
- How the marketplace works
- Featured categories
- Community positioning

- Local marketplace benefits
- Toronto and Canadian keyword targeting

Keyword Optimization

Keywords are not currently distributed effectively across:

- Title tags
- Header tags
- Meta descriptions
- Semantic HTML structure

Target keyword integration should include:

- Toronto classifieds
- Sri Lankan marketplace Canada
- Buy and sell Toronto
- Local services Toronto
- Canadian classified ads
- Real estate Toronto
- Jobs Toronto

Mobile Performance & Core Web Vitals

The website currently underperforms on mobile PageSpeed evaluations.

Current mobile metrics:

- Mobile Score: 63
- First Contentful Paint: 4.9s
- Largest Contentful Paint: 5s
- Speed Index: 7.5s

Recommended optimizations:

- Reduce unused JavaScript
- Reduce third-party scripts
- Minimize redirect chains
- Lazy load non-critical assets
- Optimize dynamic rendering

- Optimize hero section performance
- Reduce animation payloads

Target metrics:

- FCP under 2 seconds
- LCP under 2.5 seconds

Analytics & Tracking Infrastructure

No analytics implementation was detected.

The following integrations should be implemented immediately:

- Google Analytics 4
- Google Tag Manager
- Google Search Console
- Meta Pixel

Tracking events should include:

- User registrations
- Listing submissions
- Search actions
- Contact clicks
- Category navigation
- Conversion tracking

Social & Open Graph Optimization

The website is currently missing:

- Facebook Open Graph tags
- Twitter/X cards
- Connected social profiles

Required additions:

- Open Graph metadata
- Twitter card metadata
- Footer social links
- Social schema integration

Recommended social profiles:

- Facebook
- Instagram
- LinkedIn
- YouTube
- X/Twitter

Local SEO Infrastructure

No Google Business Profile or Local Business Schema was detected.

The following should be implemented:

- Google Business Profile
- LocalBusiness schema
- Toronto/GTA local SEO targeting
- NAP consistency across platforms

Internal Linking & Navigation

The audit identified zero crawlable links on the page.

This is likely related to dynamic rendering issues.

Ensure crawlable HTML anchor links exist for:

- Navigation menus
- Categories
- Listings
- Footer navigation
- Location pages

SEO Landing Pages

The current SEO structure is heavily homepage-focused.

Dedicated landing pages should be created for:

- /toronto-classifieds
- /buy-and-sell-toronto
- /local-services-toronto
- /jobs-toronto

- /real-estate-toronto
- /sri-lankan-marketplace-canada

These pages should include unique:

- Meta titles
- Meta descriptions
- Structured content
- Internal links
- Schema markup

Dynamic Listing SEO

Classified listing pages should dynamically generate:

- Unique page titles
- Meta descriptions
- Canonical URLs
- Structured data
- Open Graph content

Example:

Toyota Corolla for Sale in Toronto | HitAds.ca

Recommended Infrastructure Enhancements

The website is currently hosted on:

- Hostinger
- LiteSpeed
- Tailwind CSS

Recommended infrastructure enhancements:

- Cloudflare CDN
- LiteSpeed Cache
- Image CDN optimization
- Pre-rendering solution
- Server-side rendering architecture

Priority Order

Immediate Priority

1. Server-side rendering / crawlability improvements
2. Meta descriptions
3. XML sitemap implementation
4. Schema markup
5. Mobile performance optimization

Secondary Priority

6. Content expansion
7. Analytics setup
8. Open Graph and social metadata
9. Internal linking structure
10. Local SEO implementation

Long-Term Growth

11. SEO landing pages
12. Dynamic listing SEO
13. Backlink acquisition strategy
14. Content marketing and community pages

The website has a strong design foundation, but substantial SEO infrastructure improvements are required to properly support organic ranking, indexing, local SEO visibility, and AI/GEO discoverability.
